Kett C300 Rice Whiteness Tester

This unit is a brown/polished rice moisture tester that measures the whiteness of rice according to Japanese Industry Standard (JIS) Z8722. Just place the fixed amount of the sample in the sample case and insert it into the measurement unit, and the whiteness will be digitally displayed. Sensitivity adjustment is automatically performed by an internal microcomputer, so there's no need to perform troublesome adjustments. Furthermore, differences in measurements that come as a result of how the sample is packed can also be minimized. With the use of an optional printer, it's also possible to printout measurement values and average values, making this unit very convenient for data collection

Specifications	C-300
Measurement Method	Reflection rate by photo diode
Applications	Brown and Polished rice
Measurement Range	5-70
Display Format	Digital(LED, smallest displayed unit 0.1)
Light Source	Tungsten lamp (special for optics use)
Receiving Light	Photo diode
Output	Printer output terminal (based on Centronix)
Power Source	AC100V(50/60Hz)
Dimensions & Weight	300(W)X530(D)X100(H)mm, Net 8.0kg Shipment 14kg
Accessories	Sample case x 2, Sample tray x 2, B filter, etc.
Options	Printer(VZ-330)
